

RAG Austria AG is Austria's largest gas storage company and one of Europe's leading gas storage facility operators. The company has been making a sustainable contribution to secure energy supply for over 80 years and develops pioneering energy technologies that act as partners to renewables. Its portfolio of business activities also includes gas production, supply and trading, as well as the use of gas as a transport fuel. In the department of reservoir management and subsurface development we currently have a vacancy for a

Geoscientist (f/m)

Tasks

- Provide geoscience support for existing underground gas storage (UGS) reservoirs and future UGS developments
- Build and modify detailed geological models for UGS reservoirs in close co-operation with reservoir engineers.
- Provide drilling proposals and formation-evaluation programs
- Provide operations geology onsite support during drilling operations (geo-steering for horizontal wells)
- Load and transfer generated new geological data into databases
- Provide geoscience data to external study providers and JV partners

Qualifications

- University Degree in Geoscience/Geophysics
- Minimum 5 years relevant industry experience
- Strong expertise in building/modifying geological models (Petrel)
- Experience in development of commercial drilling projects
- Ability to provide broad geoscience experience in multidisciplinary teams
- Creativity, flexibility and excellent communication in German and English

Offer

- Excellent development opportunities in a dynamic and innovative environment
- Annual Gross Salary € 57.500, depending on your experience plus RAG Benefits

We look forward to your application!
